

A NEW PERFIN REPORTED

By Maurice Decarie

I have recently acquired three examples of what I believe to be a personal perfin which I have never seen before. The illustration shows it to comprise four letters arranged in an unorthodox pattern. The perfin has been found on the current 50¢ (Scott #723) and 3¢ (#708) definitives, and the pair are dated June 8th, 1981, with a CDS reading ton, Alta. This might be Hinton, Alta. The letters probably read 'LAPS' but the curious shape of the 'A' could be read as a 'D'. As far as I know no member of either BNAPS or the Study Group has initials which match. Can anyone add further light to this one?

The N10g and N10ga dies

The N10g and N10ga DIES

The two New York Life Insurance Company dies for Toronto (N10g & N10ga) have now been positively identified as dies of the same machine, and not two different machines. The photocopy below was supplied by Joe Purcell showing the pair of stamps with the two dies. As N10ga is now confirmed as a die variety the designation of N10ga no longer exists. For those of you who like to try plating machines, it may be of interest to determine the ratio of the dies and then reconstruct the die sequence. The obvious die differences should be of some assistance.

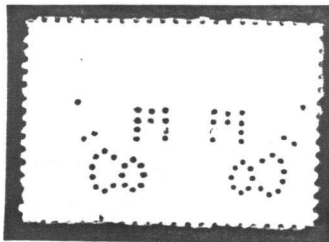

Mirror pairs hold a certain fascination for most perfin collectors. The rarity of these little gems suggest that they are worthy of special attention. They occur when a sheet of stamps is folded before insertion into the perforator, most often because the perforator is not large enough to handle a complete sheet. If a 10 x 10 sheet is folded there will occur 10 mirror pairs. As the sheet is unfolded and the stamps separated for use only the need for additional postage will result in pairs remaining intact. The chance of this occurring with the 10 mirror pairs is indeed rather small.

The rarity factor increases when we consider that many machines are (or where) capable of handling full sheets. A study of position of perfins eliminates many dies immediately. Those such as T6, which almost never occur in a position other than 'A' will not produce mirror pairs. Those perfins where only 'A' and 'C' positions are found will not produce mirror pairs either. Only in those where face-up and gum-up are in equal numbers will they occur.

If a machine not capable of handling full sheets is used on a stamp such as #301 then one wonders what happens to the center stamp. Will the fold always occur on a perforation? Or, will the center row be folded down the center of the stamp? I have examples where the latter occurs. A mirror pair of the design occurs on the stamp with an obvious fold still quite visible. Obviously not a philatelist doing the perforating! The copies I have are M15 and M10a perfins.

I would very much appreciate hearing from others who have these single copy 'mirror pairs'. It would be interesting to have a list of types where mirror pairs are possible.

(ED -example G6 on #215.)

AND ANOTHER IDENTIFICATION PUZZLE

Joe Krepp has a perfin that doesn't seem to fit anywhere. The first letter would seem to be rather obviously a 'J' and the second is a not too bad 'M'. Only one small problem, the 'M' is on its side. There doesn't appear to be a U.S. version in the U.S. Perfin Catalogue. The stamp is #117. If anyone has any ideas that make any sort of sense please send them to the Editor.

## Chairman's Notes.

For those of you who are basking in the sun, still, it is now approaching the end of September. The coming philatelic season should be an active one. All of the questionnaires will be issued before next summer and most of the preliminary results will have been forwarded to you. For those of you who are following the preliminary questionnaire results carefully, I think you will see some more surprising numbers. The year will be busy as the new edition of the Handbook will be completed by the end of next summer, if the planned timetable can be maintained. Due to this I hope you will attempt to complete all of the questionnaires and checklists as promptly as possible. If you should happen to obtain any scarcer perfins or covers which have already been surveyed by questionnaire please send a note to Joe Purcell with the additions. We will not have the time or printing facilities to reissue all of the questionnaires again as a double check system. If the material you have obtained may have come from a collector who may have reported it already on a questionnaire please still contact Joe and just mention that in your opinion the item may have been already included in the results.

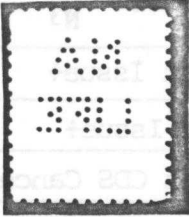

I would also like to remind you that many of the collectors on our list of participants are still adding to their collections. It is highly likely that some of your duplicates will fill holes in someone else's collection, and some of their's in your collection. Drop several people a note and see what can be arranged, the Study Group is in existence to assist you, but sometimes you have to make the first move.

The Editor has space for more questions, comments and articles starting in the next edition of the Perforator. The Study Group has enough collectors to take a good shot at most questions, although there is no guarantee that the result will be conclusive immediately. I hope you will make the maximum use of the Perforator for at the same time you are drawing the attention of many collectors to things they were not aware of. Perfins is one philatelic field where you can readily do was you like, so enjoy yourself.
