

THE BNA PERFORATOR

<u>Published by the British North America Philatelic Society – The BNA Perfin Study Group</u>

Volume 36 Number 1

February 2014

Whole Number 140

Editor's Post:

§This month we welcome Tony Parker as the newest member of the Study Group. And Tony has made his initial contribution to our newsletter with a listing of missing se-tenant perfins on page 14.

§The costs for this issue are down slightly. Printing was \$26.67 (at 11.5¢ a page for colour and 2¢ for B&W) and \$46.87 for postage making a total of \$73.54. There is one less copy to mail to Canada. This is the last issue to be mailed to those members without internet connections at the current postal rates. The new rates no doubt will be substantially higher. If there are no changes there will be 14 copies mailed to Canadian addresses and 6 to foreign; 4 to the USA, 2 to Australia and 1 to the Netherlands.

§Barry Senior received an email from Ed Fraser inquiring about Thomas Cook "underground" mail. The article in the 4th Quarter issue of Topics on this subject prompted his contacting the Study Group. Although Thomas Cook did not perfin stamps in Canada, some of you may have perfins or covers from other Countries. If you have an interest Ed can be contacted at edfraser@gmail.com. If you need his mailing address you can contact either Barry or I.

§The 85th Convention of the Royal Philatelic Society will be held at the Lord Nelson Hotel in Halifax on the above-noted dates. The Lord Nelson is located adjacent to our Public Gardens and Spring Garden Road, the centre of shopping and dining in downtown Halifax. The Lord Nelson was built in 1925-27 by a consortium led by Canadian Pacific and corner card envelopes of the Hotel can be found with Canadian Pacific C34 (Montreal) perfins. I will be around on May 30th and would love to get together for a coffee with any Study group member who is planning to attend that day.

§The last of Gary Tomasson's award winning exhibit of faked 5 hole OH/MS perfins appear on Pages 5 to 8. On behalf of the membership I want to thank Gary for sharing the information in the exhibit with us. Certainly with the amount of 5 hole material you can find in some auction houses and on eBay the "caveat emptor" rule most certainly applies.

The 4th Edition of the Canadian Stamps with Perforated Initials included a section of the S22 perforating machines of Sun Life Assurance Company. Currently this section is not included in the 5th Edition; perhaps someday I can convince the Editors to change their minds. In the meantime I continue to try and finish correctly placing the dies of those patterns that Conrad Tremblay did not and to dream of the desk top software that will identify the dies through a process of scanning and matching. I had occasion to visit with Doug Lingard in Ottawa and to go through his collection of S22 covers, some of which I purchased. I have compiled a list cover dates from his collection as well as CDS postmarks from my own collection. I would appreciate anything you can add which would fill in the blanks or correct the information currently included.

Faked 5	Hole	OH/MS	Perfins	(08)

Editor

IDENTIFICATION 5-hole OH/MS STAMPS

HOLE BY HOLE FAKE

Code - M14-S10-O9

The distance between Die's A and B is 0.25 mm too small; whereas, the distance between Die's B and C is correct. There are not enough holes in Die A or Die C to assign a Key Hole Code. The stamp was found on the west coast of Canada.

HOLE BY HOLE FAKE

Code - M13-S5-H9

This is a mint stamp. Note: the missing hole at "S8". The die was most likely made by super imposing a genuine perfin over the stamp and perforating the fake one hole at a time. This stamp was found on the west coast of Canada.

PHILATELIC ISSUE

Royal Visit Cover

Based on Postal records neither the Department of Finance nor the Financial Branch of the Post Office was perforating stamps on May 15th, 1939. All stamps are genuine as proved by coding.

One must assume the stamps were perforated as a favour.

Hand cancelled with OTTAWA / 14 / MY 15 / 39 / CANADA

The 1¢ stamp was perforated with the 5-hole OH/MS Dies III & IV, the 2¢ with Die III and the 3¢ with Die III & IV.

CONCLUSIONS Seven Points

 The Key Code Hole system can easily identify genuine 5-hole OH/MS stamps and the various fake 5-hole OH/MS stamps.

• Fake 5-hole OH/MS stamps can be found on the 1911-1925, King George V 'Admiral' issued stamps to the May 15th, 1939 'Royal Visit' issued stamps.

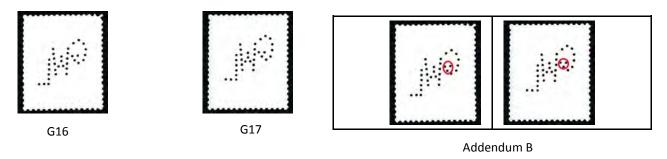

- More fake 5-hole OH/MS stamps were found in Western Canada collections than in Eastern Canada collections.
- Rare 5-hole OH/MS stamps have a much higher failure rate.
- Most fake 5-hole OH/MS stamps are made by the 'hole by hole' method.
- There are at least five known fake perforating machines: 2 with one die, 1 with a one and a half die and 2 with two dies.
- On pictorial stamps the perforating is generally done with Die I and ½ of Die II on first stamp, ½ of Die II and all of Die III on the second stamp and Die IV and Die V on the third or last stamp.

Great West Life Winnipeg and Detroit

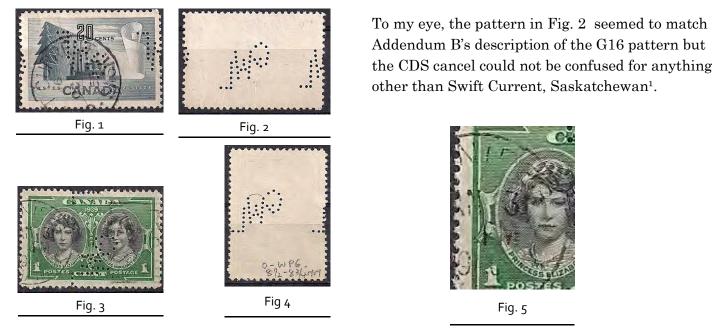

Jim Graham/Bob Szymanski

A recent purchase of a few GWL perfins has prompted this article. Most of the stamps purchased were the G17 pattern; however 3 were identified as the G16 pattern. The 5th Edition of the CSPI handbook indicates that this latter pattern was created by the Great West Life perforating machine located in Detroit Michigan with usage beginning with the Mufti issue and ending with the Karsh. My curiosity was aroused when I noticed that one of the 3 stamps had been cancelled in Swift Current Saskatchewan (Fig. 1 and Fig. 2) which is rather a long way from Detroit.

The patterns below are from the 5th Edition and the illustration showing the difference between G16 and G17 is from Addendum B

Addendum B states "In G17, the hole below the crossbar on the "G" is centered on the two holes above it. G16 has a fuller curve on the bottom of the "G"".

The other 2 stamps identified as G17's and the one in my own collection did not have a discernable cancel information that was helpful. I then examined all the G16's I have and found 2 additional items to further my curiosity. The first is this 1937 1ϕ Royal Visit.

The "off-centre" hole in the G crossbar in Fig. 4 suggests this is the G16 pattern from Detroit but the cancel is clearly Winnipeg (Fig. 5). The pencil markings (Fig. 4) of an earlier collector are interesting; it appears as if the distance between the top stems of the "W" has been measured. Perhaps there was some doubt in the mind of the collector that this stamp could have been perforated in Detroit.

^{1.} Google maps didn't locate any Swift Current communities in the USA

Finally there is this example. The pair of 3ϕ Admirals in Figure 6 are perf'd in both position 1, partially and position 2, completely . The "G" in position 2 appears to me to be the G16 "G", while the "G" in position 1 seems to be the G17 "G".

The points of comparison from Addendum "B" I think are apparent. The "G" in Fig. 7 has the more pointed bottom and evenly spaced 3 hole configuration while the "G" in Fig. 8 has the more rounded bottom and unevenly spaced 3 hole configuration.

The enlarged Fig. 9 shows a discernable "--nnipeg" in the roller cancel. The "26" might be the year and perhaps someone with more knowledge of cancelling devices could confirm or correct my impression.

Discussion: The reason that postage stamps were perforated is well accepted. I think there are three purposes which companies used their perforated stamps.

- 1. To use as postage for their regular mailings
- 2. To use as pre-paid postage on return envelopes
- 3. To use to pay the government tax on certain financial transactions.

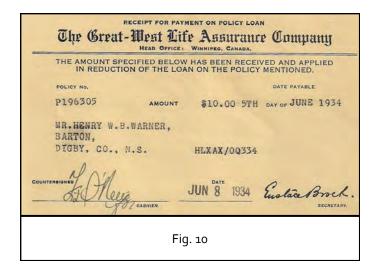

We all have in our collections examples of these 3 uses. Which of these reasons would possess the Detroit office of Great Life Assurance to perforate Canadian stamps from 1937 to 1954? Did Great West Life policy holders in southern Ontario conduct its business with the Detroit office? Perhaps the machine simply moved across the river to Windsor Ontario. This could be validated by finding the G16 pattern with Windsor cancels or cancels from other southern Ontario towns from pre-stamped return envelopes. This would also be true if the accounts were serviced from Detroit.

There is a legitimate reason for the G16 pattern to turn up with western Canada cancels. We have 2 examples of perforating machines that made long distance moves. The Canadian National C24 machine moved from Toronto to Alberta and the Swift Canadian S4 machine from Saskatoon to Moncton. Perhaps the machine in the Detroit office did in fact arrive in Winnipeg.

Finally, why does our own Catalogue list the earliest date as 1933/06/13 when the first stamp listed (the 1¢ Mufti) was not issued until 1937?

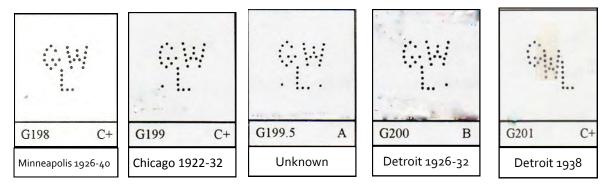

2. A quick email to the library in Windsor elicited the information that Great West is listed in a 1937 city directory as having an office at 345 Ouelette Street and the 1953 city directory gives the exact same address. Thanks to Lea!

What can the US perfin usage of Great West Life tell us. There are 5 Great West Life patterns known and although the pattern is different for four of them, the same sort of "system" of code holes seems to be in use. The office in Minneapolis used GW/L has no code hole while other offices using the GW/L have an identifying code hole. The Canadian G17 pattern is from Winnipeg, the Canadian Head Office for Great West Life (as the receipt in Fig. 10 attests). Is the reason the Minneapolis office pattern has no code hole because it was the Head Office for the Company operations in the US?

A brief internet search determined only that the company was founded in Fargo North Dakota and incorporated in Kansas.

Here are the US patterns attributed to Great West Life, the US catalogue number and the RF rating. The outlier is the 2nd listing for Detroit which uses the Canadian pattern configuration.

The dates given with the locations are based on known issues. The single date for G201 denotes the period of use of the "Prexy" issues which was in use from 1938 to 1953 (see Fig. 11). These are almost the exact dates listed for the Canadian G16 pattern al. Ron Whyte does have a G201 on a Scott #901 which could very well be the latest known use for this pattern (see Fig.12) and amend the US Catalogue date to 1940.

One possibility is the US Great Western Life Assurance Company had an office in Detroit until sometime around the mid to late 30's that was closed by 1938 (the date of the Prexy issues). After all, this was the depths of the depression and for a company to close an office would not be out of the ordinary. A check through a local directory might be helpful. If this is the case, the company must have had a good deal of business and (because of the G201 design and match to Winnipeg) the company may have decided it was best to handle the business from that location - at least for a while. US stamps with a Canadian perfin on return reply mail would be logically a good educated guess. Another scenario could be that the company just decided to stop using a perforator in the mid to late 30's and several company customers, maybe emigrants from Canada to the US may have had their policies serviced from a Canadian branch (Winnipeg) .

Fig. 11

There is much conjecture here and many questions arise. Why would Detroit have 2 machines? Why would one of them use a different configuration from the other US locations? How did both the Canadian and US catalogues come to identify the G16/G201 pattern as being from Detroit? Are they simply die variations from the same pattern? If they are separate machines then some office was perforating stamps from 2 Countries. Maybe the office in Fargo ND closed and the Winnipeg office serviced customers using prepaid return envelopes with US postage. More information is needed and what would be most helpful would be readable CDS cancels or covers with Canadian and US issues perforated with the G16/G201 pattern. Scans of the back of other G201's would also be helpful.

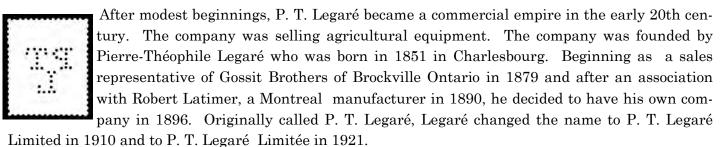

Please have look through your collections and see if you can any stamps which would assist clarify these questions. Information can be forwarded to either Jim Graham (contact information is one page 1) or Bob Szymanski at:

10 Clarridge Circle Milford MA 1757 USA perfinman@comcast.net

Thanks to Ron Whyte for additional scans

P. T. LEGARÉ LTD. (P21)

Jean-Guy Dalpé

The head office of the company was located in Quebec City, but there were also stores in Sherbrooke and in Montreal. By 1912, the Company had eleven branches in the province of Quebec. In 1916, P. T. Legaré Limited bought the Percival Plow & Stove Company Limited from Merrickville, in Ontario.

The Company used an illustrated bilingual catalogue to reach its customers; in the catalogue, it was not only possible to find everything to run a farm, but also other items like sewing machines, furniture, washing machines, pianos etc; to summarize, everything for an agricultural community. Legaré became famous throughout Quebec, Eastern Ontario and Northern New-Brunswick. Pierre-Théophile Legaré passed away in 1926. Financial and legal difficulties started the company's decline after 1930.

The Post Office approved P. T. Legaré using a perforator on May 23rd 1912. The perfin was

approved on 1912-05-23 and the first use reported is the previous day, May 22nd. It seems that the company ceased to use perfins around July or August 1927 as Scott #141 (1¢ Confederation), the last issue currently reported in the 5th Edition, was issued June 29th, 1927.

The P21 perfin is reported to have been used on the following stamps (Scott #'s): 104, 105 I, 105 I iv, 105 II, 106, 107, 107a, 107e, 108, 108c, 109 I, 109 II, 110, 111, 112, 112a, 112 iv, 113, 116, 117, 118, 119, 119c, 119 iv, 135, 141, MR1, MR2, MR3, MR3a, MR4 and MR5. Inland War Tax stamps could have been perforated although none have been reported to date.

Table 2^1 lists all of the issues known to exist as well as the distribution of the 1159 P21 perfins in my collection.

CAT#			POSITION	•		TOTAL	CAT#			POSITION	,		TOTAL

	906	1	36	67	31	1041		83	3	23	8	3	120
								906	1	36	67	31	1041
								989	4	59	75	34	1161

 $^{1\}phi$ (104, 105 I, 105 I iv, 105 II, MR1, 141): 350 stamps.

It also appears that the company has perforated more stamps before 1922; I have only 91 (7,8%) with stamps printed in 1922 or later. Stamps produced by the dry printing process are not easy to find, except for 109 I and 109 II: only 54 (4,5%).

^{2¢ (106, 107, 107}a, 107e, MR 2, MR3, MR3a, MR4, MR5): 593 stamps.

 $^{3\}phi$ (108, 108c, 109 I, 109 II, 135) : 179 stamps.

^{1.} The Table uses the numbering from a 1999 Unitrade catalogue to denote wet or dry printing without reference to the shade varieties.

The most common position found is position 1(989 stamps or 85,1%). Four other positions were found: position 2 (4 stamps or 0,3%), position 3 (59 stamps or 5%), position 5 (75 stamps or 6,5%) and position 7 (34 stamps or 3%). Was the perforator a five or ten die machine? How to explain position 1 is so widely used compared to the other positions? The operators seem to have worked carefully; 58 stamps (5%) were found with more than one perforation (double or triple).

The perforated also seems to have been in good condition and to have been kept in good order, 27 stamps (2,3%) were found with one or more missing pins. But one copy of 105 die I and one copy of 109 die I show a lot of missing pins; maybe it has been a reason to stop the use of the perforator.

MacLean Publishing Co Ltd Update

Jack Brandt of Calgary has forwarded scans of 4 more covers with MacLean Publishing JBM perfins; 2 with publication mastheads and 2 with a general office masthead.

All of the mastheads are different in some way from those previous shown, even if you look at similar covers in the same time period. The office masthead with no return address is a window envelope suggesting no reply was expected—a receipt maybe.

The Canadian Machinery cover paid the 1¢ printed matter rate to the US and was forwarded on to a second post office. The 2 receiving strikes make a very attractive item.

Based on the known issues listed in the 5th Edition Perfin usage by MacLean seems to have taken a bit of a hiatus through the late 1920's. After the Admiral issues of 1922 only the 2¢ Arch (green) and the 4¢ Pictorial are known. Usage appears to have resumed with the Mufti issue as all the low value denominations are known. Are there any late usage covers in members collections that we can add to the inventory?

Our thanks to Jack for sharing his covers through Canada Post.

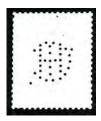

Canadian International Harvester Pre-cancel Update

Readers may recall the late Steve Koning's scans in the June 2011 issue (Number 132) of the I14 Winnipeg pattern (missing hole "0") on these three Ottawa pre-cancels.

Jean-Guy Dalpé has provided scans of 4 more Admiral pre-cancels from Calgary, Edmonton, Montreal and a 4th from Ottawa with the same I14 Winnipeg perforation; i.e. the die with missing hole"0".

It seems that some one with access to the I14 machine was having a little fun (I hope not for profit!). Are there more of these in members collections Can anyone provide additional information?

Our thanks to Jean-Guy for sending these along.
